1. Find all elements of order 5, 6 and 7 of $\text{Sym}(5)$.
2. Let G be a group and H be a subgroup of G . Show that the map

$$gH \longmapsto Hg^{-1}$$

is a bijection between the set of left cosets of H in G and the set of right cosets of H in G .

3. Let G be a group and H a normal subgroup of G .

3a. Show that the map

$$g \longmapsto gH$$

is a group homomorphism from G onto G/H .

- 3b.** What is the kernel of the above homomorphism?

4. Let $\phi : G \rightarrow H$ be a surjective homomorphism between two groups. Let K be a normal subgroup of G . Show that $\phi(K)$ is a normal subgroup of H .

5. Find all homomorphisms from \mathbb{Z} into itself.

6. Let $G := \left\{ \begin{pmatrix} x & y \\ z & t \end{pmatrix} : x, y, z, t \in \mathbb{Z} \text{ and } xt - yz = 1 \right\}$.

6a. Is G a group? Why? What is the inverse of the element $\begin{pmatrix} x & y \\ z & t \end{pmatrix}$ of G ?

6b. For an integer n , define

$$G_n := \left\{ \begin{pmatrix} x & y \\ z & t \end{pmatrix} \in G : x, t \in 1 + n\mathbb{Z} \text{ and } y, z \in n\mathbb{Z} \right\}.$$

Show that G_n is a normal subgroup of G and that G/G_n is finite.
